30RB 039-160 "A"/30RQ 039-160

Nominal cooling capacity 30RB: 40-156 kW

Nominal cooling capacity 30RQ: 38-149 kW

Nominal heating capacity 30RQ: 42-158 kW

The Aquasnap range of liquid chillers/air-to-water heat pumps was designed for commercial (air conditioning of offices, hotels etc.) or industrial (low-temperature process units etc.) applications.

The Aquasnap integrates the latest technological innovations:

- ozone-friendly refrigerant R410A
- All-aluminium microchannel heat exchangers for the cooling only units (30RBS)
- scroll compressors
- low-noise fans made of a composite material
- auto-adaptive microprocessor control
- electronic expansion valve
- variable-speed pump (option)

The Aquasnap can be equipped with a hydronic module integrated into the unit chassis, limiting the installation to straightforward operations like connection of the power supply and the chilled water supply and return piping.

Features

Quiet operation

- Compressors
 - Low-noise scroll compressors with low vibration level
 - The compressor assembly is installed on an independent chassis and supported by anti-vibration mountings
 - Dynamic suction and discharge piping support, minimising vibration transmission (Carrier patent)
- Condenser (30RB)/air evaporator/condenser (30RQ) section
 - Vertical condenser coils
 - Protection grilles on anti-vibration mountings to protect the heat exchanger against possible shocks.
 - Low-noise latest-generation Flying Bird IV fans, made of a composite material (Carrier patent) are now even quieter and do not generate intrusive low-frequency noise
 - Rigid fan installation for reduced start-up noise (Carrier patent)

Easy and fast installation

■ Integrated hydronic module (option)

- Centrifugal low or high-pressure water pump (as required), based on the pressure loss of the hydronic installation

Hydronic module

- Single or dual water pump (as required) with operating time balancing and automatic changeover to the back-up pump if a fault develops
- Water filter protects the pump against circulating debris
- Pressure measurement, using two pressure transducers and allowing indication of water flow rate, water pressure and lack of water.
- High-capacity membrane expansion tank ensures pressurisation of the water circuit
- Overpressure valve, set to 4 bar
- Speed variator on the pumps (option) to ensure the correct flow rate, based on the system requirements
- Thermal insulation and frost protection down to -20°C, using an electric resistance heater (see table of options)

■ Physical features

- The unit has a small footprint and a low height (1330 mm) allowing it to blend in with any architectural styles.
- The unit is enclosed by easily removable panels, covering all components (except air heat exchangers and fans).

■ Simplified electrical connections

- A single power supply point without neutral
- Main disconnect switch with high trip capacity
- Transformer for safe 24 V control circuit supply included

■ Fast commissioning

- Systematic factory operation test before shipment
- Quick-test function for step-by-step verification of the instruments, electrical components and motors

Economical operation

- Optional variable-speed pump for economical operation
- The control algorithm adjusts the water flow rate based on the actual system requirements and obsoletes the need for the control valve at the unit outlet.

■ Increased energy efficiency at part load

- Eurovent energy efficiency class (in accordance with EN14511-3:2011) C and D in cooling mode and B and C in heating mode.
- The refrigerant circuit includes several compressors connected in parallel. At part load, around 99% of the operating time, only the compressors that are absolutely necessary operate. At these conditions the compressors operating are more energy efficient, as they use the total condenser and evaporator capacity.
- The electronic expansion device (EXV) allows operation at a lower condensing pressure (EER, COP and ESEER optimisation).
- Dynamic superheat management for better utilisation of the water heat exchanger surface.
- Defrost cycle optimisation (30RQ)

■ Reduced maintenance costs

- Maintenance-free scroll compressors
- Fast diagnosis of possible incidents and their history via the Pro-Dialog+ control
- R410A refrigerant is easier to use than other refrigerant blends

Environmental care

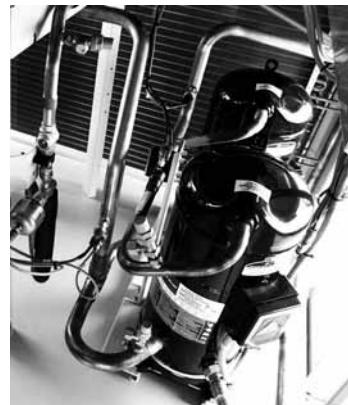

■ Ozone-friendly R410A refrigerant

- Chlorine-free refrigerant of the HFC group with zero ozone depletion potential
- Very efficient - gives an increased energy efficiency ratio (EER, COP and ESEER)
- 50% reduction in the refrigerant charge through the use of micro-channel heat exchangers for the cooling only units (30RBS)

■ Leak-tight refrigerant circuit

- Brazed refrigerant connections for increased leak-tightness
- Reduction of leaks due to reduced vibration levels and elimination of capillary tubes (TXVs)
- Verification of pressure transducers and temperature sensors without transferring refrigerant charge

Partial view of the hydronic circuit

Superior reliability

■ State-of-the-art concept

- Cooperation with specialist laboratories and use of limit simulation tools (finite element calculations) for the design of the critical components, e.g. motor supports, suction/discharge piping etc.
- All aluminium micro-channel heat exchanger (MCHE) on cooling only units (30RBS), offers increased corrosion resistance compared to traditional coils. The all-aluminium design eliminates the formation of galvanic currents between aluminium and copper that cause coil corrosion.

■ Auto-adaptive control

- Control algorithm prevents excessive compressor cycling and permits reduction of the water quantity in the hydronic circuit (Carrier patent)
- Hydronic module with integrated pressure transducers allowing measurement of the water pressure at two points, as well as measurement of the water flow rate and detection of lack of water and pressure. This considerably reduces the risk of problems such as frost accumulation on the water heat exchanger.
- Automatic compressor unloading in case of abnormally high condensing pressure. If an anomaly occurs (e.g. fouled air heat exchanger coil, fan failure) Aquasnap continues to operate, but at reduced capacity.

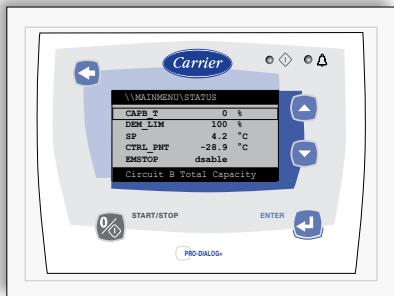

■ Exceptional endurance tests

- Corrosion resistance tests in salt mist in the laboratory
- Accelerated ageing test on components that are submitted to continuous operation: compressor piping, fan supports
- Transport simulation test in the laboratory on a vibrating table.

Pro-Dialog+ control

Pro-Dialog+ combines intelligence with operating simplicity. The control constantly monitors all machine parameters and precisely manages the operation of compressors, expansion devices, fans and of the water heat exchanger water pump for optimum energy efficiency.

Pro-Dialog+ interface

■ Energy management

- Seven-day internal time schedule clock: permits unit on/off control and operation at a second set point
- Set point reset based on the outside air temperature or the return water temperature or on the water heat exchanger delta T
- Master/slave control of two units operating in parallel with operating time equalisation and automatic change-over in case of a unit fault (accessory).
- Change-over based on the outside air temperature

■ Integrated features

- Night mode: capacity and fan speed limitation for reduced noise level
- With hydronic module: water pressure display and water flow rate calculation

■ Ease-of-use

- The new backlit LCD interface includes a manual control potentiometer to ensure legibility under any lighting conditions.
- The information is displayed clearly in English, French, German, Italian and Spanish (for other languages please consult Carrier)
- The Pro-Dialog+ navigation uses intuitive tree-structure menus, similar to the Internet navigators. They are user-friendly and permit quick access to the principal operating parameters: number of compressors operating, suction/discharge pressure, compressor operating hours, set point, air temperature, entering/leaving water temperature

Remote operating mode with volt-free contacts (standard)

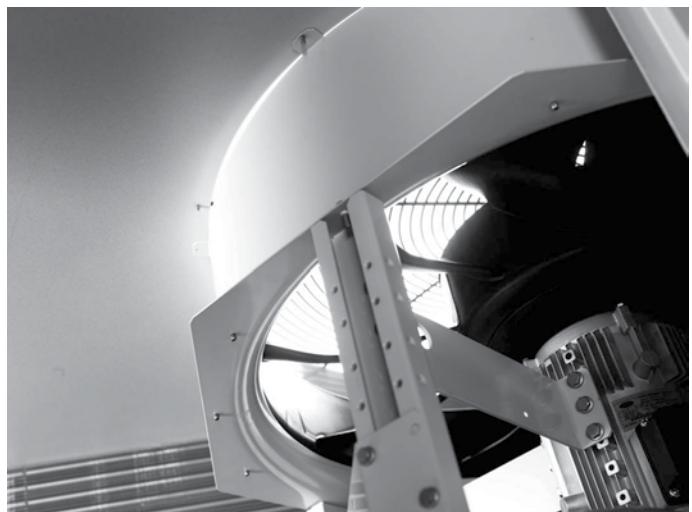

A simple two-wire communication bus between the RS485 port of the Aquasnap and the Carrier Comfort Network offers multiple remote control, monitoring and diagnostic possibilities. Carrier offers a vast choice of control products, specially designed to control, manage and supervise the operation of an air conditioning system. Please consult your Carrier representative for more information on these products.

- Start/stop: opening of this contact will shut down the unit
- Dual set point: closing of this contact activates a second set point (example: unoccupied mode)
- Water pump 1 and 2 control (contacts supplied with the hydronic module option)*: these outputs control the contactors of one or two water heat exchanger water pumps
- Alarm indication: this volt-free contact indicates the presence of a major fault that has led to the shut-down of one or two refrigerant circuits
- Demand limit 1 and 2: closing of these contacts limits the maximum unit capacity to three predefined values
- User safety: this contact can be used for any customer safety loop, closing of the contact generates a specific alarm
- Out of service: this signal indicates that the unit is completely out of service

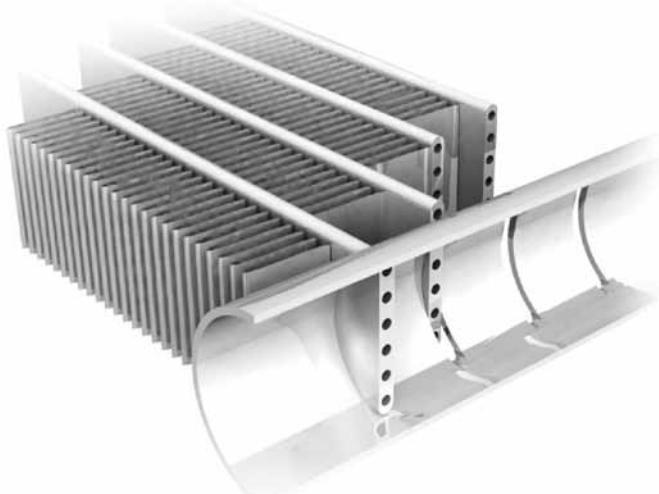

Remote interface (accessory)

This interface allows access to the same menus as the unit interface and can be installed up to 300 m away. This accessory includes a box that can be mounted inside the building. The power supply is provided via a 220 V/24 V transformer supplied.

Flying Bird IV fan

All-aluminium micro-channel heat exchanger (MCHE)

Already utilised in the automobile and aeronautical industries for many years, the MCHE micro-channel heat exchanger is entirely made of aluminium. This one-piece concept significantly increases its corrosion resistance by eliminating the galvanic currents that are created when two different metals (copper and aluminium) come into contact in traditional heat exchangers.

As an option, the Enviro-Shield and Super Enviro-Shield anti-corrosion protections have been developed to increase the application range of the MCHE coil from medium to very corrosive environments. With Enviro-Shield protection, corrosion resistance of the MCHE coil is doubled without any impact on heat exchange.

With Super Enviro-Shield protection corrosion resistance of the MCHE coil is multiplied by four, and allows use in very corrosive industrial or marine environments

The MCHE heat exchanger allows a reduction in chiller refrigerant charge by up to 50%.

The low thickness of the MCHE reduces air pressure losses by 50% and makes it less susceptible to fouling (e.g. by sand) than a traditional coil. Cleaning of the MCHE heat exchanger is very fast using a dry air jet or a high-pressure washer, while observing the usage precautions.

Options

Options	No.	Description	Advantages	Use
Air heat exchanger with anti-corrosion post-treatment	2B	Coils with factory-applied Blygold Polual treatment	Improved corrosion resistance, recommended for urban, industrial and rural environments	30RBS 039-160
Air heat exchanger with pre-treated fins	3A	Fins made of pre-treated aluminium (polyurethane or epoxy)	Improved corrosion resistance, recommended for marine environments	30RBS/RQS 039-160
Very low noise level	15LS	Acoustic compressor enclosure and low-speed fans (12 r/s or 720 rpm)	Noise emission reduction	30RBS/RQS 039-160
Soft starter	25	Electronic compressor starter	Reduced compressor start-up current	30RBS/RQS 039-080
Winter operation*	28	Fan speed control via frequency converter	Stable unit operation when the air temperature is between -10°C and -20°C	30RBS 039-160
Frost protection down to -20°C	42	Electric heater on the hydronic module	Hydronic module frost protection at low outside temperature	30RBS/RQS 039-160
Partial heat reclaim	49	Partial heat reclaim by desuperheating of the compressor discharge gas. Note: With option 49 the units are equipped with traditional coils (Cu/Al).	Free high-temperature hot-water production simultaneously with chilled and hot-water production	30RBS/RQS 039-160
Master/slave operation	58	Unit equipped with an additional field-installed leaving water temperature sensor, allowing master/slave operation of two units connected in parallel	Operation of two units connected in parallel with operating time equalisation	30RBS/RQS 039-160
High-pressure single-pump hydronic module	116B	Single high-pressure water pump, water filter, expansion tank, temperature and pressure sensors. See hydronic module option.	Easy and fast installation	30RBS/RQS 039-160
High-pressure dual-pump hydronic module	116C	Dual high-pressure water pump, water filter, expansion tank, temperature and pressure sensors. See hydronic module option.	Easy and fast installation, operating safety	30RBS/RQS 039-160
Low-pressure single-pump hydronic module	116F	Single low-pressure water pump, water filter, expansion tank, temperature and pressure sensors. See hydronic module option.	Easy and fast installation	30RBS/RQS 039-160
Low-pressure dual-pump hydronic module	116G	Dual low-pressure water pump, water filter, expansion tank, temperature and pressure sensors. See hydronic module option.	Easy and fast installation, operating safety	30RBS/RQS 039-160
High-pressure variable-speed single-pump hydronic module	116J	Single high-pressure water pump, water filter, expansion tank, temperature and pressure sensors. See hydronic module option.	Easy and fast installation, power consumption reduction of the water circulation pump	30RBS/RQS 039-160
High-pressure variable-speed dual-pump hydronic module	116K	Dual high-pressure water pump, water filter, expansion tank, temperature and pressure sensors. See hydronic module option.	Easy and fast installation, operating safety, power consumption reduction of the water circulation pump	30RBS/RQS 039-160
High-pressure single-pump hydronic module without expansion tank	116R	Single high-pressure water pump, water filter, temperature and pressure sensors. See hydronic module option.	Easy and fast installation	30RBS/RQS 039-160
High-pressure dual-pump hydronic module without expansion tank	116S	Dual high-pressure water pump, water filter, temperature and pressure sensors. See hydronic module option.	Easy and fast installation, operating safety	30RBS/RQS 039-160
Low-pressure single-pump hydronic module without expansion tank	116T	Single low-pressure water pump, water filter, temperature and pressure sensors. See hydronic module option.	Easy and fast installation	30RBS/RQS 039-160
Low-pressure dual-pump hydronic module without expansion tank	116U	Dual low-pressure water pump, water filter, temperature and pressure sensors. See hydronic module option.	Easy and fast installation, operating safety	30RBS/RQS 039-160
High-pressure variable-speed single-pump hydronic module without expansion tank	116V	Single high-pressure water pump, water filter, temperature and pressure sensors. See hydronic module option.	Easy and fast installation, reduced power consumption of the water circulation pump	30RBS/RQS 039-160
High-pressure variable-speed dual-pump hydronic module without expansion tank	116W	Dual high-pressure water pump, water filter, temperature and pressure sensors. See hydronic module option.	Easy and fast installation, operating safety, reduced power consumption of the water circulation pump	30RBS/RQS 039-160
JBus gateway	148B	Two-directional communications board, complies with JBus protocol	Easy connection by communication bus to a building management system	30RBS/RQS 039-160
BacNet gateway	148C	Two-directional communications board, complies with BacNet protocol	Easy connection by communication bus to a building management system	30RBS/RQS 039-160
LonTalk gateway	148D	Two-directional communications board, complies with LonTalk protocol	Easy connection by communication bus to a building management system	30RBS/RQS 039-160
Enviro-Shield anti-corrosion protection for microchannel heat exchangers (MCHE)	262	Carrier factory treatment of the MCHE heat exchanger for applications in standard and moderately corrosive environments	Improved corrosion resistance, recommended for moderately corrosive marine and industrial environments.	30RBS 039-160
Super Enviro-Shield anti-corrosion protection for microchannel heat exchangers (MCHE)	263	Carrier factory treatment of the MCHE heat exchanger for applications in corrosive environments	The Super Enviro-Shield option was developed to extend the application range of MCHE heat exchangers in very corrosive environmental conditions.	30RBS 039-160
Water heat exchanger screw connection sleeves	264	Inlet/outlet screw connection sleeves	Permit connection of the unit to a screw connection	30RBS/RQS 039-160
Welded water heat exchanger connection sleeves	266	Welded inlet/outlet connection sleeves	Permit connection of the unit to a connection other than a Victaulic connection	30RBS/RQS 039-160
Remote interface	275	Remotely installed user interface (via communication bus).	Remote unit control up to 300 m	30RBS/RQS 039-160

* Winter operation option: This option allows operation of the unit down to -20°C outside temperature due to the optimised control of the condensing temperature. One fan is equipped with a frequency converter.

Partial heat reclaim using desuperheaters (option 49)

This option permits the production of free hot water using heat reclaim by desuperheating the compressor discharge gases. The option is available for the whole 30RBS/RQS range, that are equipped with traditional Cu/Al coils.

A plate heat exchanger is installed in series with the air condenser coils on the compressor discharge line of each circuit.

Hydronic module (option 116)

This module is equipped with pressure transducers to optimise unit operation at the hydronic level.

The hydronic module option reduces the installation time. The unit is factory-equipped with the main hydronic components required for the system: screen filter, water pump, expansion tank, safety valve and water pressure transducers.

The pressure transducers allow the Pro-Dialog+ control to:

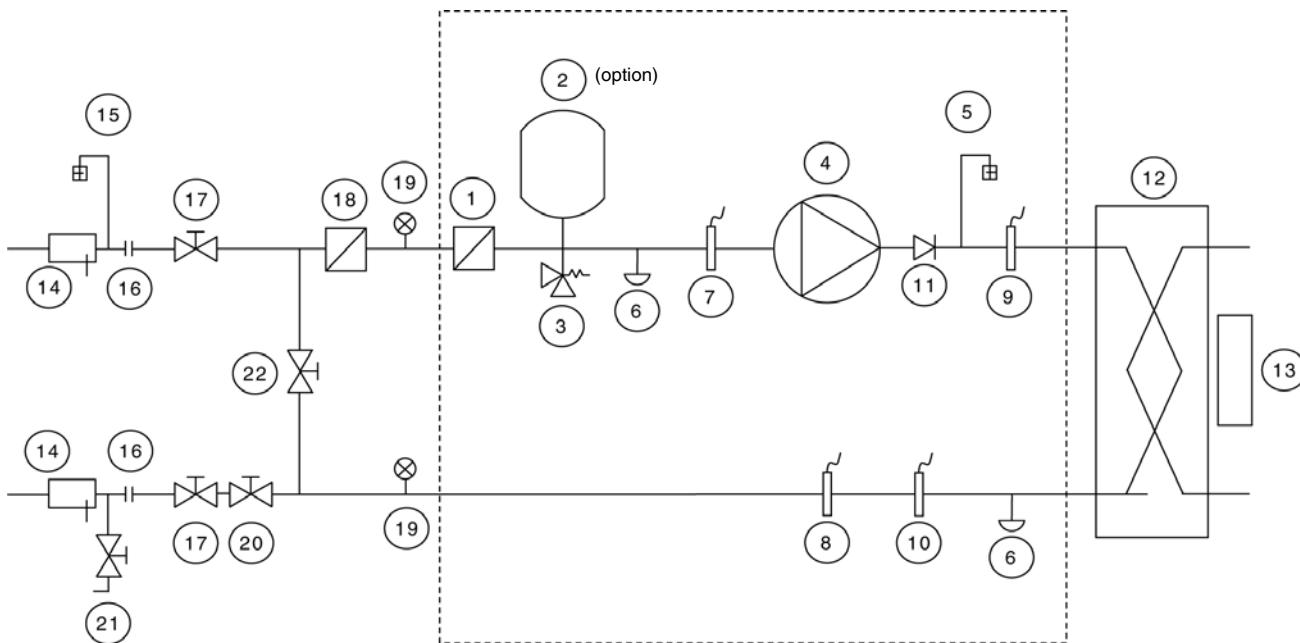

- display the available pressure at the unit outlet and the static system pressure
- calculate the instantaneous flow rate, using an algorithm that integrates the unit characteristics
- integrate the system and water pump protection devices (lack of water, water pressure, water flow rate etc.)

Several water pump types are available: primary single or dual low-pressure pump or single or dual high-pressure pump.

An automatic pump start-up algorithm protects the heat exchanger and the hydronic module piping against frost down to -10°C outside temperature, if the water heat exchanger frost protection option is installed. If necessary increased frost protection down to -20°C is possible by adding heaters to the hydronic module piping (see option 42).

The hydronic module option is integrated into the unit without increasing its dimensions and saves the space normally used for the water pump.

Typical hydronic circuit diagram

Legend

Components of the unit and hydronic module

- 1 Victaulic screen filter
- 2 Expansion tank (option)
- 3 Safety valve
- 4 Available pressure pump
Note: x 1 for a single pump, x 2 for a dual pump
- 5 Air purge
- 6 Water drain valve
Note: A second valve is located on the heat exchanger leaving piping
- 7 Pressure sensor
Note: Gives pump suction pressure information (see installation manual)
- 8 Temperature probe
Note: Gives heat exchanger leaving temperature information (see installation manual)
- 9 Temperature probe
Note: Gives heat exchanger entering temperature information (see installation manual)
- 10 Pressure sensor
Note: Gives unit leaving pressure information (see installation manual)
- 11 Check valve
Note: x 2 for a dual pump, not provided for a single pump
- 12 Plate heat exchanger
- 13 Water heat exchanger frost protection heater

Installation components

- 14 Temperature probe well
 - 15 Air vent
 - 16 Flexible connection
 - 17 Shut-off valve
 - 18 Screen filter (obligatory for a unit without hydronic module)
 - 19 Pressure gauge
 - 20 Water flow control valve
Note: Not necessary for a hydronic module with a variable-speed pump
 - 21 Charge valve
 - 22 Frost protection bypass valve (when shut-off valves [17] are closed during winter)
- **Hydronic module (unit with hydronic module)**

Electrical data, units with hydronic modules

The pumps that are factory-installed in these units have motors with efficiency class IE2. The additional electrical data required by regulation 640/2009 is given in the installation, operation and maintenance manual.

This regulation concerns the application of directive 2005/32/EC on the eco-design requirements for electric motors.

* Earthing system type
 ** If another current limitation protection system is used, its time-current and thermal constraint (I^2t) trip characteristics must be at least equivalent to those of the recommended Schneider circuit breaker. Contact your nearest Carrier office.
 The short-circuit stability current values above are in accordance with the TN system.

Part load performances

With the rapid increase in energy costs and the care about environmental impacts of electricity production, the power consumption of air conditioning equipment has become an important topic. The energy efficiency of a unit at full load is rarely representative of the actual performance of the units, as on average a unit works less than 5% of the time at full load.

IPLV (in accordance with AHRI 550/590)

The IPLV (integrated part load value) allows evaluation of the average energy efficiency based on four operating conditions defined by the AHRI (Air Conditioning, Heating and Refrigeration Institute). The IPLV is the average weighted value of the energy efficiency ratios (EER) at different operating conditions, weighted by the operating time.

IPLV (integrated part load value)

Load %	Air temperature °C	Energy efficiency	Operating time %
100	35	EER ₁	1
75	26.7	EER ₂	42
50	18.3	EER ₃	45
25	12.8	EER ₄	12

$$\text{ESEER} = \text{EER}_1 \times 1\% + \text{EER}_2 \times 42\% + \text{EER}_3 \times 45\% + \text{EER}_4 \times 12\%$$

Note: Constant leaving water temperature 6.67°C.

Part load performances

30RBS 039-160

30RBS	039	045	050	060	070	080	090	100	120	140	160
IPLV	kW/kW	4.54	4.71	4.81	4.58	4.26	4.39	4.55	4.53	4.55	4.29
ESEER	kW/kW	3.75	3.88	3.95	3.80	3.62	3.67	3.91	3.94	3.83	3.68

30RQS 039-160

30RQS	039	045	050	060	070	078	080	090	100	120	140	160
IPLV	kW/kW	4.57	4.54	4.51	4.21	4.18	4.29	4.58	4.40	4.46	4.90	4.33
ESEER	kW/kW	3.80	3.77	3.81	3.61	3.61	3.57	3.84	3.77	3.88	4.04	3.75

ESEER Calculations according to standard performances (in accordance with EN14511-3:2011) and certified by Eurovent.

IPLV Calculations according to standard performances (in accordance with AHRI 550-590)

The heat load of a building depends on many factors, such as the outside air temperature, the exposure to the sun and the building occupancy.

Consequently it is preferable to use the average energy efficiency, calculated at several operating points that are representative for the unit utilisation.

ESEER (in accordance with EUROVENT)

The ESEER (European seasonal energy efficiency ratio) permits evaluation of the average energy efficiency at part load, based on four operating conditions defined by Eurovent. The ESEER is the average value of energy efficiency ratios (EER) at different operating conditions, weighted by the operating time.

ESEER (European seasonal energy efficiency ratio)

Load %	Air temperature °C	Energy efficiency	Operating time %
100	35	EER ₁	3
75	30	EER ₂	33
50	25	EER ₃	41
25	20	EER ₄	23

$$\text{ESEER} = \text{EER}_1 \times 3\% + \text{EER}_2 \times 33\% + \text{EER}_3 \times 41\% + \text{EER}_4 \times 23\%$$

Note: Constant leaving water temperature 7°C.

Electrical data and operating conditions notes:

- 30RB/RQ 039-160 units have a single power connection point located immediately upstream of the main disconnect switch.
- The control box includes the following standard features:
 - a main disconnect/isolator switch,
 - starter and motor protection devices for each compressor, the fans and the pump,
 - the control devices.
- Field connections:
All connections to the system and the electrical installations must be in full accordance with all applicable local codes.
- The Carrier 30RB/RQ units are designed and built to ensure conformance with these codes. The recommendations of European standard EN 60204-1 (machine safety - electrical machine components - part 1: general regulations - corresponds to IEC 60204-1) are specifically taken into account, when designing the electrical equipment.

NOTES:

- Generally the recommendations of IEC 60364 are accepted as compliance with the requirements of the installation directives. Conformance with EN 60204-1 is the best means of ensuring compliance with the Machines Directive § 1.5.1.
- Annex B of EN 60204-1 describes the electrical characteristics used for the operation of the machines.

- The operating environment for the 30RB/RQ units is specified below:

- Environment* - Environment as classified in EN 60721 (corresponds to IEC 60721):
 - outdoor installation*
 - ambient temperature range: -20°C to +48°C, class 4K4H
 - altitude: ≤ 2000 m (for hydronic kit see chapter 9.2 of the installation manual)
 - presence of hard solids, class 4S2 (no significant dust present)
 - presence of corrosive and polluting substances, class 4C2 (negligible)
- Power supply frequency variation: ± 2 Hz.
- The neutral (N) conductor must not be connected directly to the unit (if necessary use a transformer).
- Overcurrent protection of the power supply conductors is not provided with the unit.
- The factory-installed disconnect switch is of a type suitable for power interruption in accordance with EN 60947.
- The units are designed for connection to TN(S) networks (IEC 60364). For IT networks the earth connection must not be at the network earth. Provide a local earth, consult competent local organisations to complete the electrical installation.

Caution: If particular aspects of an actual installation do not conform to the conditions described above, or if there are other conditions which should be considered, always contact your local Carrier representative.

* The required protection level for this class is IP43BW (according to reference document IEC 60529). All 30RB/RQ units are protected to IP44CW and fulfil this protection condition.

Operating limits, 30RBS

Evaporator water flow rate

30RBS	Flow rate, l/s			
	Minimum	Maximum*	Maximum dual pump**	
			Low pressure***	High pressure***
039	0.9	3.0	2.9	3.4
045	0.9	3.4	3.2	3.8
050	0.9	3.7	3.3	4.0
060	0.9	4.2	3.7	4.4
070	1.0	5.0	4.1	5.0
080	1.2	5.5	4.4	5.2
090	1.3	6.8	5.1	6.2

120	1.7	8.5	6.5	8.0
140	2.0	10.6	7.9	8.7
160	2.3	11.2	8.2	8.9

* Maximum flow rate at a pressure drop of 100 kPa in the plate heat exchanger (unit without hydronic module).

** Maximum flow rate at an available pressure of 20 kPa (unit with low-pressure hydronic module) or 50 kPa (high-pressure module).

*** Maximum flow rate with single pump is 2 to 4% higher, depending on the size.

Operating range

30RBS		Minimum	Maximum
Evaporator			
Entering water temperature at start-up			
Entering water temperature during operation	°C	7.5*	30
Leaving water temperature during operation	°C	5**	20
Entering/leaving water temperature difference	K	3	10
Condenser			
Entering air temperature, full load***	°C	-10	46
Entering air temperature, part load***	°C	-10	48
Hydronic module****			
Entering air temperature			
Kit without pump	°C	-20	-
Kit with pump (option 116x)	°C	-10	-
Kit with pump (option 116x) and frost protection option to -20°C (option 42)	°C	-20	-

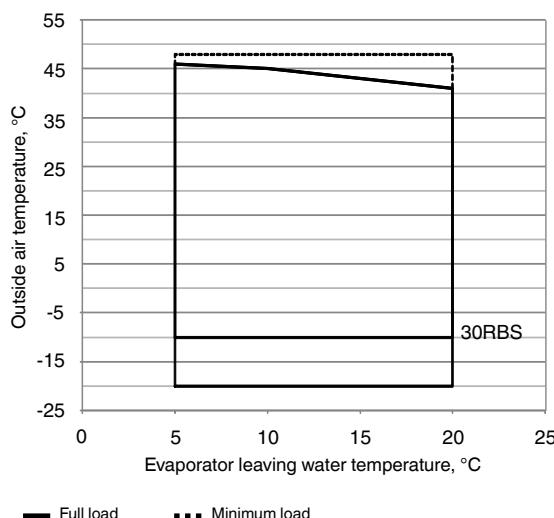

Note: Do not exceed the maximum operating temperature.

* For entering water temperatures below 7.5°C at start-up, contact Carrier.

** For low-temperature applications, where the leaving water temperature is below 5°C, a frost protection solution must be used.

*** Ambient temperature: Please refer to option 20 for low-temperature applications (< -10°C). For transport and storage of the 30RBS units the minimum and maximum allowable temperatures are -20°C and +48°C. It is recommended that these temperatures are used for transport by container.

**** Defines the frost-free temperature of the hydronic components for use without glycol.

NOTE: This operating range applies up to 130 Pa static pressure without suction air duct for sizes 070 and 080 and 140-160, and up to 240 Pa for all other sizes.

Operating limits, 30RQS

 - B For the location of fixing points, weight distribution and coordinates of the centre of gravity refer to the certified dimensional drawings.
 - C In multiple-unit installations (maximum four units), the side clearance between the units should be increased from 1000 to 2000 mm.
 - C The height of the solid surface must not exceed 2 m.

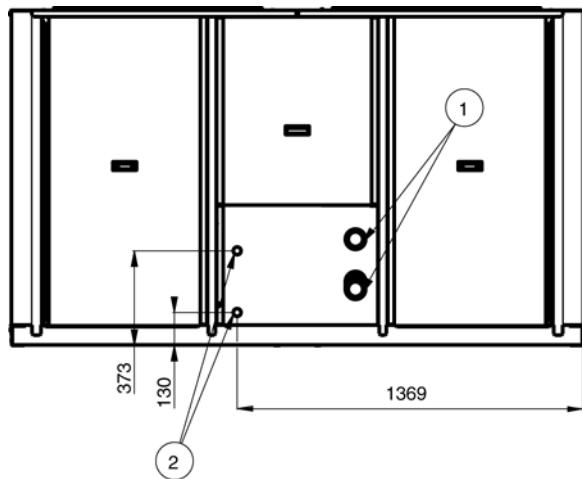

Dimensions/clearances for 30RBS/RQS units with option 49

Position of the desuperheater inlets and outlets

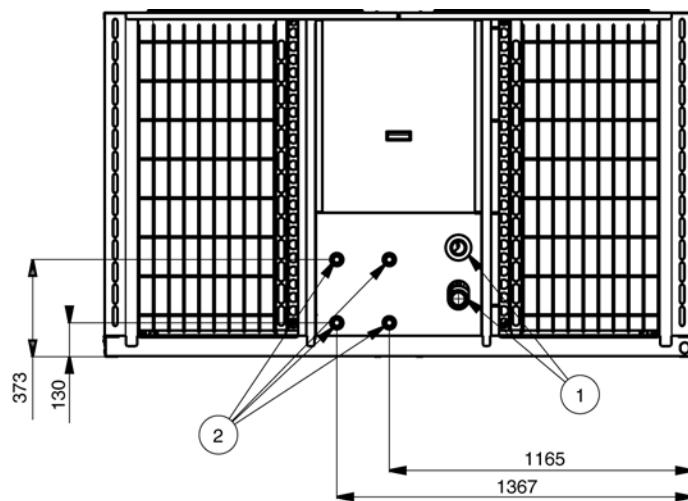

30RBS/RQS 039-080

30RBS/RQS 090-120

30RBS/RQS 140-160

(1) Unit water inlet and outlet

(2) Water inlet and outlet, unit with option 49

Cooling capacities in accordance with EN14511-3 : 2011

30RBS units

Legend
LWT Leaving water temperature, °C
Qc Cooling capacity, kW
EER Energy efficiency ratio, kW/kW
q Evaporator water flow rate, l/s
Δp Evaporator pressure drop, kPa

Application data
 Standard units, refrigerant: R-410A
 Evaporator entering/leaving water temperature difference: 5 K
 Evaporator fluid: chilled water
 Fouling factor: $0.18 \times 10^{-4} (\text{m}^2 \text{K})/\text{W}$
 Performances in accordance with EN14511-3:2011.

Variable water flow system (VWF)

Variable water flow is a hydronic control function package that permits control of the water flow rate.

The VWF not only ensures control at full load, a specific Carrier algorithm linked to an electronic frequency converter also continuously modulates the flow rate to minimise pump consumption at full load as well as part load.

The hydronic module includes pressure transducers that permit intelligent measurement of the water flow rate and real-time display on the Pro-Dialog+ interface. All adjustments can be made directly on the interface, speeding up start-up and maintenance.

As VWF acts directly on the pump, the system no longer requires the control valve at the unit outlet. However, for applications with two-way valves a bypass system must be kept to guarantee the minimum flow rate.

Operating logic

■ Full-load set point

The flow rate control at full load uses the Pro-Dialog+ interface, reducing the pump speed. This first control saves energy that would normally be dissipated in the control valve. For example, if the pressure supplied by the pump is reduced by 20% the power consumption of the pump is reduced by the same ratio, compared to a traditional installation.

■ Operating mode at part load

Pro-Dialog+ includes two part-load operating modes:

- Constant outlet pressure control
- Constant delta T control.

1 – Constant unit outlet pressure control

The control continuously acts on the pump speed to ensure a constant outlet pressure.

This solution is suitable for installations with two-way valves. When these close, the water speed will accelerate in the system branches that are still open. For a fixed-speed pump this results in an unnecessary increase of the pressure at the pump outlet.

The outlet pressure control mode ensures that each circuit branch always has a uniform supply, without unnecessary energy waste.

In industrial processes such as plastic injection moulding, this solution ensures that each terminal unit has the correct pressure supply.

2 – Constant delta T control

The VWF algorithm maintains a constant delta T no matter what the unit load, reducing the flow rate to the minimum.

This solution can be used for systems with two-way or three-way valves and achieves higher energy savings than the “Constant unit outlet pressure control” mode. It is suitable for the majority of comfort applications.

Order No.: 13461-20.04.2013. Supersedes order No.: 13461-20.10.2012.
